Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on February 10, 2005 was filed after the mailing date of the Notice of Allowance on January 24, 2005. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner is considering the information disclosure statement.

Allowable Subject Matter

1. Claims 1, 2, 4, 6, 7, 14, 15, 17, 19, 20, 26, 27 and 30 are allowed over prior art.
2. The following is an examiner's statement of reasons for allowance: Applicant has amended claims to correct previous 112, second paragraph rejection, and Applicant has canceled previously rejected claims 3-5, 8-13, 16, 18, 21-25, 28, 29 and 31-36.

Although the prior art discloses a receiver for OFDM modulated transmission signal, wherein there includes sample sequence data for determining a cross-correlation calculator, calculate cross-correlation values, synchronizing symbols are added to frames, detecting synchronizing patterns in sample sequence, sample clock sequence, controlling clock frequency in response to time intervals, a controllable clock generator used to produce receiver sampling clock sequence with controllable sampling data, reproductions of synchronizing symbols are synchronization patterns, production of an auxiliary/main synchronizing symbols, and it is preferred that synchronizing symbol produces a sharp autocorrelation peak, voltage controlled oscillator, frame/symbol clock sequences, a selector that compares correlation values with respect to their peaks, a multi-carrier transmission system associated with OFDM signaling wherein the

architecture includes system controller, symbol detection, sampling clock controlled by frame time estimator, correlator and peak estimator (correlation arithmetic), transmitter/receiver devices, inter-symbol interference peak detector for detecting peak levels, sampling clock generated by a voltage controlled crystal oscillator, predefined symbol carriers define inter-symbol interference, a receiver for multi-carrier signals that are transmitted by OFDM which includes estimation/correction circuit, wherein the architecture includes correlation circuits that have peak tracking, difference signal for samples, first symbol carrier and inter-symbol interference carrier, peaks are detected by peak detectors, FFT windows necessary for signal reconstruction, FFT window synchronization circuit and frame/symbol periods, frequency controller suspends control of the controllable oscillator, and the interference is minimized with respect to the carrier modes they fail to teach/suggest in a predetermined time window provided with position of a null symbol, and obtaining cross-correlation peaks in a principle wave, and reflected wave in a comparison of cross correlation value with a predetermined value, an interference discrimination unit coupled with a correlation arithmetic operation unit, for detecting which peak is a less inter-symbol interference in a cross-correlation peaks obtained from a principle wave and reflected wave.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
